

FORTIS Wind Energy

Since 1981 over 6,400 Fortis units have been erected worldwide and more are being added almost daily. Our sturdy reliable wind turbines operate across all continents, meeting a variety of applications such as powering rural farms and homes, public buildings, small and medium sized businesses.

Fortis turbines operate in Mauretania's hot, windy and sand swept Sahara desert or extreme cold temperature and stormy wind conditions experienced by Fortis units while powering scientific research stations at Antarctica.

The technical concept of Fortis Wind Energy
